CAP182 SS1 – Part C: Data Request Additions

Addition to Table 1: Trial Period Viewer Behaviour

Source: STADIOstream viewing logs and search logs, during the trial period.

Column name	Data type	Example
Search query text	String; Categorical	"Korean drama", "live soccer"
Session ID	String; Categorical	SESS-00234
Genre watched per session	String; Categorical list	Drama

New Table 4: Trial User Demographics

Source: Customer profile data, at point of trial signup.

Column name	Data type	Example
Age band	String; Categorical	"25-34"
Stated interests	String; Categorical list	"Sport, Movies"
Account ID	String; Categorical	ACC-4812167

Implementation notes

• Genre is currently captured at trial level only (existing "Genres/niche watched" field). The
version intended for feature engineering; the existing aggregate field can remain as a sani

• Session ID does not currently exist in any table. It is a new addition required to make ses

Additional information
The text or category of each search made during the trial period
A unique identifier for each individual viewing session, used to link session level genre data below
The genre/s watched within a single session, linked to Session ID, rather than aggregated across the whole trial

Additional information
Age range of the customer at trial sign up. Values: "18-24", "25-34", "35-44", "45-54", "55+"
Interest categories selected by the customer at sign up, if collected
A unique identifier for a customer's account. Has to be consistent on all platforms to link records

e new "Genre watched per session" field is the more granular
ity check.

ssion level genre tracking possible.
